

Waste Compaction Machinery Suppliers for Carpets

Demand for clean identified source carpet offcuts is increasing and manufacturers, distributors, retailers and flooring contractors can take advantage of this by diverting offcuts from landfill and reducing disposal costs.

To optimise transport cost in sending materials to recyclers it is worth looking at installing a baler which can be used for carpet offcuts as well as other valuable materials such as plastic wrap and cardboard.

The baler suppliers below offer a wide range of baler types to suit large and small businesses and can advise you based on their experiences with providing balers for carpets.

Kenburn Carpet Crusher

Established in 1987 Kenburn Waste Management has built a highly respected reputation as one of the UK's leading suppliers of premium quality waste handling machinery.

Kenburn provide free of charge no obligation waste surveys and advice to establish the environmental and financial benefits of compacting and recycling new and uplifted carpet waste using a Kenburn "carpet crusher".

As well as supplying a variety of waste handling machinery solutions, Kenburn also provide the logistical advice for having waste collected and recycled and that expertise also applies to carpet waste.

Once baled carpet waste can be collected by recyclers to make non-woven felt products, equestrian surface products or it can be used as a replacement fuel for cement kilns. Note the feasibility of recycling depends on the kind of carpet waste, volume and transport distance.

Kenburn is able to advise on carpet recycling contacts based on your requirements.

As well as compacting carpet and underlay waste for recycling, the carpet crusher also compacts cardboard and plastic wrapping waste as well and these waste streams when compacted generate revenue.

For more information or to arrange a waste survey please contact Kenburn on 01727 844988
